#### **DETAILED ACTION**

### Claim Rejections - 35 USC § 112

1. Applicant's amendment in Paper No. 22 overcomes the 112- first and second paragraph rejections.

## Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-7 and 19-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Olsen(2,292,469) in view of Jacobson(4,094,248) and Smith et al(5,682,013).

Olsen discloses a propellant composition that comprises nitrocellulose and ethyl acetate as solvent (page 2, col. 1, lines 10-11), diphenylamine (pg. 2, col. 2, lines 13-15), dibutylphthalate, and nitroglycerin (pg. 3, col. 2 lines 35-40). On pg. 2, col 1, it is indicated that the viscosity can be modified by the use of increased or decreased solvent and that one viscosity is such that a 5/16" diameter steel ball requires 1,000 seconds to fall ten inches. It is also indicated here that lower viscosities tend to speed the purification. The composition may be extruded through dies to form a perforated cylindrical grain or further changed into any desired form (pg. 4, col. 2, lines 25-32). This reference indicates in several places the ratio of solvent to nitrocellulose, on pg. 3,

Application/Control Number: 09/505,501

Art Unit: 3641

col.1, lines 5-15, the ratio can range from 8:1 to 4:1. It also indicates that the particles can be composed of 4-6 parts of solvent to about 5 parts nitrocellulose. Further, on pg. 4, col.2, lines 18-21, indicate that the solvent content is reduced to a point where the globules contain 8 parts solvent to 10 parts nitrocellulose. These ratios can readily be converted into percentages. The particular shape is not disclosed.

Jacobson and Smith et al teach two propellant shapes. Jacobson teaches a shape with external grooves and Smith teaches one with a cylindrical shape.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to form the composition of Olsen into the shapes taught by Jacobson and Smith et al since it is suggested by Olsen that the propellant can be formed into any shape. It would also have been obvious to vary the viscosity of the lacquer to suit any purpose since Olsen suggests that this can be easily done by varying the amount of solvent. There is also no indication that the viscosity obtained by Olsen is any different than that which is claimed by the Applicant. Thus, the viscosity is considered an inherent property of the composition of Olsen. As to limitations which are considered to be inherent in a reference, note the case law of In re Ludke, 169 USPQ 563; In re Swinehart, 169 USPQ 226, In re Fitzgerald, 205 USPQ 594; In re Best et al, 195 USPQ 430; and In re Brown, 173 USPQ 685, 688. It is also noted that the claims only require nitrocellulose and solvent and list all the other ingredients such as diphenylamine, nitroglycerin, and dibutylphthalate as optional. It would be obvious to one of ordinary skill to determine the amounts of these ingredients needed and also since no amount is disclosed by Olsen there is no way to know that the amount isn't the

Application/Control Number: 09/505,501 Page 4

Art Unit: 3641

same amount that is claimed by Applicant. It would be obvious to vary the amounts of solvent and nitrocellulose within the ranges indicated by Olsen. It is well-settled that optimizing a result effective variable is well within the expected ability of a person of ordinary skill in the art. In re Boesch, 617 F.2d 272, 205 USPQ 215 (CCPA 1980), In re Aller, 220 F.2d 454, 105 USPQ 233 (CCPA 1955).

## Response to Arguments

4. Applicant's arguments filed 9/23/03 have been fully considered but they are not persuasive. Applicant argues that Olsen is not a lacquer, however in page 2, lines 24-30, the disclosure indicates that it is a lacquer composition. The percents are not shown in the disclosure but ratios of solvent to nitrocellulose are shown in page 3, lines 4-17. The viscosity is also shown on page 2, lines 33-37. Olsen clearly discloses that the viscosity can be varied to suit many purposes by merely altering the amount of solvent used. Olsen also discloses that the lacquer composition can be extruded through dies to create a perforated pellet on page 4, lines 22-32. Jacobson and Smith et al are used to merely teach different shapes of pellets that can be formed and are not intended to show any of the composition of the instant invention. In response to applicant's arguments against the references individually, one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See In re Keller, 642 F.2d 413, 208 USPQ 871 (CCPA 1981); In re Merck & Co., 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986).

#### Conclusion

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Aileen Felton whose telephone number is (703) 306-5751. The examiner can normally be reached on Monday through Friday from 6:30 am to 4:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Carone, can be reached on (703) 306-4198.

The fax phone number for the organization where this application or proceeding is assigned is (703) 305-7687. The fax number for submissions before a final action is (703) 872-9326, for after final submissions is (703) 872-9327, and customer service is (703) 872-9325.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-1113.

Aileen B. Felton
